

SQ26 Part 2 — QDArchive Classification Report

Student ID: 23080363 | Final report generated from the classification SQLite database

Executive Overview

This report covers the complete Part 2 workflow for the QDArchive seeding project. Two repositories were assigned: the IHSN Survey Catalog and the Harvard Murray Research Archive. Every project was first classified by type based on the files it contains, then assigned an ISIC Rev. 5 subject label using a keyword-scoring heuristic that reads each project's title, description and keywords, giving the title the greatest weight.

2	886	855	12,670
Assigned repositories	Total projects in database	ISIC-classified projects	Primary files classified

Repository scope

Repository	Projects	Classified	Description
IHSN Survey Catalog	500	500	International household surveys — NADA API + web scraping.
Harvard Murray Research Archive	386	355	Qualitative social-science archive — Harvard Dataverse API.

Only QD_PROJECT and QDA_PROJECT entries receive an ISIC label. OTHER_PROJECT and NOT_A_PROJECT entries are counted in the database but are excluded from the ISIC classification scope by design.

Data collection summary

Measure	Result	Interpretation
Total projects seeded	886	Projects recorded across both repositories.
Total file download attempts	15,836	All download attempts logged in the FILES table.
Files successfully saved	5,720	Confirmed on disk; passed PDF byte-header check.
Restricted — login required	9,769	Files exist but require formal access approval.
Keywords extracted	6,093	Subject keywords stored alongside project metadata.

1. Project-Type Classification

The first classification step assigns each project a type based solely on the file extensions it contains. Content is not inspected — only file types. Our own scraping artefacts (metadata.json, metadata_ddi.xml) are excluded so they do not distort the results.

Project-type definitions

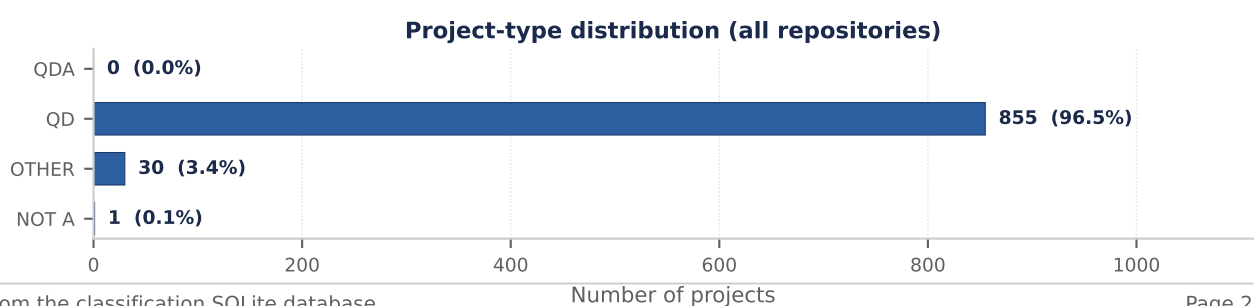

Project type	Classification rule
QDA_PROJECT	Contains at least one recognised QDA analysis file (qdp, mx24, nvp, atproj,...)
QD_PROJECT	No QDA file, but contains primary data files (pdf, docx, txt, rtf, audio, video,...)
OTHER_PROJECT	Contains only other data files (sav, dta, csv, xml,...)
NOT_A_PROJECT	No usable file types found — metadata-only or empty

Project-type distribution by repository

Repository	QDA	QD	Other	Not a project
IHSN Survey Catalog	0	500	0	0
Harvard Murray Research Archive	0	355	30	1
Both repositories combined	0	855	30	1

The IHSN corpus is entirely composed of QD projects: every one of the 500 seeded entries contains downloadable documentation such as PDF questionnaires, DDI metadata exports, or technical reports. The Harvard Murray Archive is more varied: most of its 386 datasets qualify as QD projects, but 30 entries contain only statistical files (OTHER_PROJECT) and one entry had no derivable files.

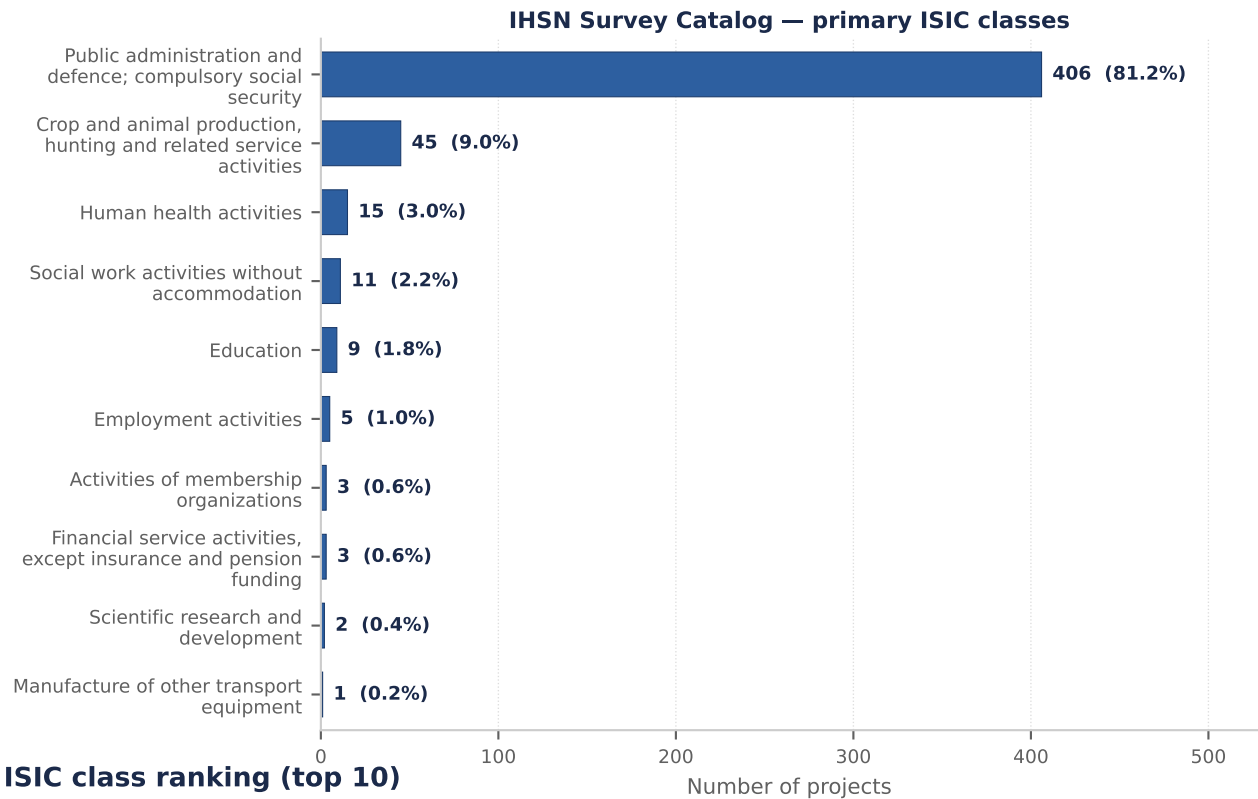

Project-type counts — both repositories combined

3. Results — IHSN Survey Catalog

500 Total projects	500 ISIC-classified	2,733 Files classified	10 Distinct ISIC classes
--	---	--	--

Primary ISIC class distribution (top 10)

Primary ISIC class ranking (top 10)

Rank	ISIC Rev. 5 class	Count	Share	Cumulative
1	Public administration and defence; compulsory social security	406	81.2%	81.2%
2	Crop and animal production, hunting and related service activities	45	9.0%	90.2%
3	Human health activities	15	3.0%	93.2%
4	Social work activities without accommodation	11	2.2%	95.4%
5	Education	9	1.8%	97.2%
6	Employment activities	5	1.0%	98.2%
7	Activities of membership organizations	3	0.6%	98.8%

Total classified projects in this repository: 500.

3. Interpretation — IHSN Survey Catalog

Across the 500 classified projects in the IHSN Survey Catalog repository, “Public administration and defence; compulsory social security” is the dominant subject area, covering 406 projects (81% of the collection). It is followed by “Crop and animal production, hunting and related service activities” (45 projects, 9%) and “Human health activities” (15, 3%). Together the three leading classes account for 93% of all classified entries.

In total 10 distinct ISIC Rev. 5 divisions are represented in this repository, making it a highly concentrated collection. 2 of those divisions appear only once or twice, forming a long tail of niche subject areas.

The repository holds 500 QD and 0 QDA projects (the only types that receive an ISIC label), alongside 0 other-data projects and 0 entries with no derivable files. The strong dominance of government and administration topics reflects IHSN's mandate as a registry for official household and demographic survey programmes. Most downloadable content is metadata exports, PDF questionnaires, and codebooks — not raw microdata, which is almost always restricted.

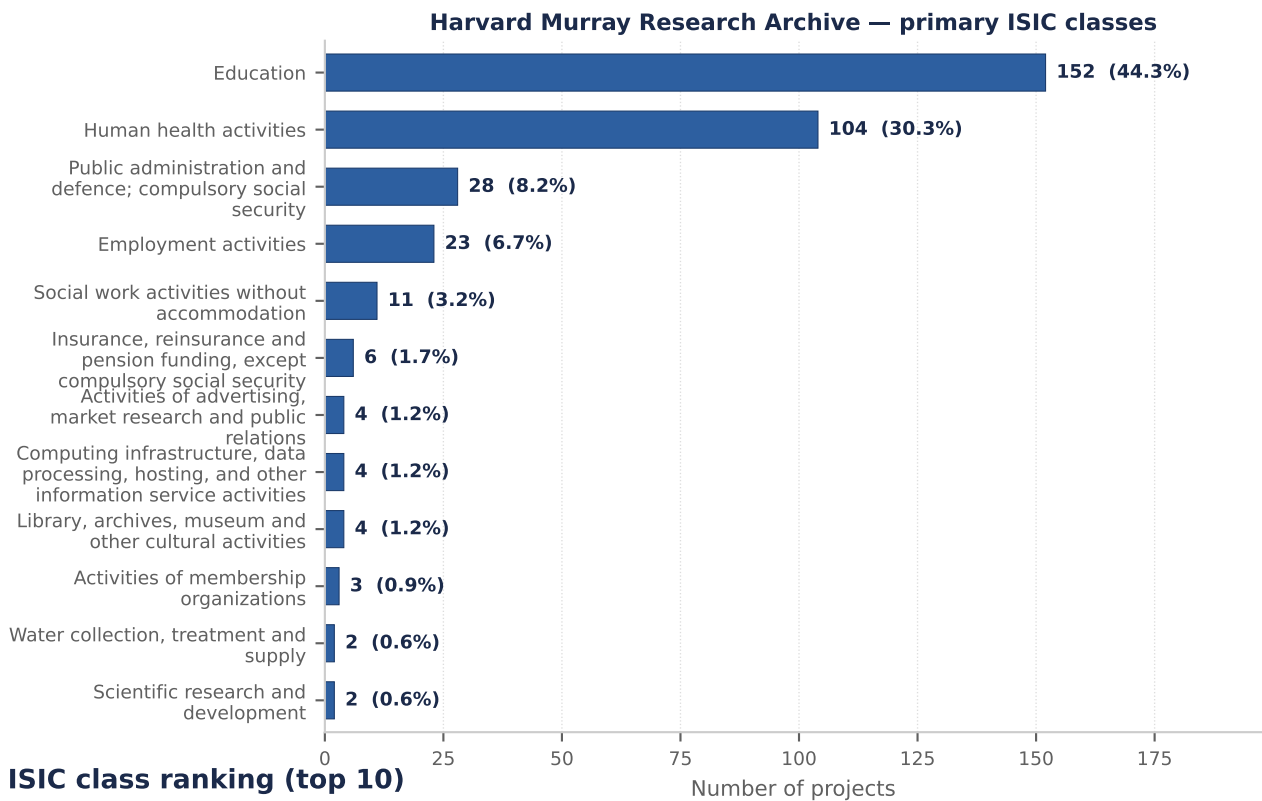

Full ISIC class breakdown

Rank	ISIC Rev. 5 class	Count	Share	Cumulative
1	Public administration and defence; compulsory social security	406	81.2%	81.2%
2	Crop and animal production, hunting and related service activities	45	9.0%	90.2%
3	Human health activities	15	3.0%	93.2%
4	Social work activities without accommodation	11	2.2%	95.4%
5	Education	9	1.8%	97.2%
6	Employment activities	5	1.0%	98.2%
7	Activities of membership organizations	3	0.6%	98.8%
8	Financial service activities, except insurance and pension funding	3	0.6%	99.4%
9	Scientific research and development	2	0.4%	99.8%
10	Manufacture of other transport equipment	1	0.2%	100.0%

4. Results — Harvard Murray Research Archive

386 Total projects	355 ISIC-classified	9,937 Files classified	24 Distinct ISIC classes
--	---	--	--

Primary ISIC class distribution (top 12)

Primary ISIC class ranking (top 10)

Rank	ISIC Rev. 5 class	Count	Share	Cumulative
1	Education	152	42.8%	42.8%
2	Human health activities	104	29.3%	72.1%
3	Public administration and defence; compulsory social security	28	7.9%	80.0%
4	Employment activities	23	6.5%	86.5%
5	Social work activities without accommodation	11	3.1%	89.6%
6	Insurance, reinsurance and pension funding, except compulsory social security	6	1.7%	91.3%
7	Activities of advertising, market research and public relations	4	1.1%	92.4%

Total classified projects in this repository: 355.

4. Interpretation — Harvard Murray Research Archive

Across the 355 classified projects in the Harvard Murray Research Archive repository, “Education” is the dominant subject area, covering 152 projects (43% of the collection). It is followed by “Human health activities” (104 projects, 29%) and “Public administration and defence; compulsory social security” (28, 8%). Together the three leading classes account for 80% of all classified entries.

In total 24 distinct ISIC Rev. 5 divisions are represented in this repository, making it a moderately concentrated collection. 14 of those divisions appear only once or twice, forming a long tail of niche subject areas.

The repository holds 355 QD and 0 QDA projects (the only types that receive an ISIC label), alongside 30 other-data projects and 1 entry with no derivable files. The broader spread of subject classes reflects the Harvard Murray Archive's roots in mid-20th-century psychology and social science: education, health research, and employment surveys all feature alongside public administration. Most of the archive's files are access-restricted, but the metadata was sufficient to classify the majority of projects.

Full ISIC class breakdown

Rank	ISIC Rev. 5 class	Count	Share	Cumulative
1	Education	152	42.8%	42.8%
2	Human health activities	104	29.3%	72.1%
3	Public administration and defence; compulsory social security	28	7.9%	80.0%
4	Employment activities	23	6.5%	86.5%
5	Social work activities without accommodation	11	3.1%	89.6%
6	Insurance, reinsurance and pension funding, except compulsory social security	6	1.7%	91.3%
7	Activities of advertising, market research and public relations	4	1.1%	92.4%
8	Computing infrastructure, data processing, hosting, and other information service activities	4	1.1%	93.5%
9	Library, archives, museum and other cultural activities	4	1.1%	94.6%
10	Activities of membership organizations	3	0.8%	95.5%
11	Water collection, treatment and supply	2	0.6%	96.1%
12	Scientific research and development	2	0.6%	96.6%

6. Combined Classification Summary

The table below brings the classification results from both repositories into a single overview. ISIC totals reflect only projects that qualified for classification (QD and QDA types). File-level classifications were produced independently for every primary data file.

Repository	Projects	QD	QDA	Other	NAP	Classified	Files
IHSN Survey Catalog	500	500	0	0	0	500	2,733
Harvard Murray Research Archive	386	355	0	30	1	355	9,937

Top 5 ISIC classes — both repositories combined

Rank	ISIC Rev. 5 class	Count	Share	Cumulative
1	Public administration and defence; compulsory social security	434	50.8%	50.8%
2	Education	161	18.8%	69.6%
3	Human health activities	119	13.9%	83.5%
4	Crop and animal production, hunting and related service activities	46	5.4%	88.9%
5	Employment activities	28	3.3%	92.2%

Conclusion

Both repositories were successfully scraped, typed, and classified within the ISIC Rev. 5 taxonomy. The IHSN corpus is highly concentrated in public administration and demographic survey topics, which reflects its institutional mandate. The Harvard Murray Archive shows a wider subject spread, consistent with its social-science and psychology heritage. Together the two repositories contributed 855 ISIC-classified projects and 12,670 file-level classifications stored in the delivery database.

By enforcing a clean separation between raw metadata ingestion and derived classification layers, the resulting datasets maintain strict integrity. These deliverables include the SQLite database, structured Excel sheets, and this report. They establish a reliable and reproducible foundation for future research across different repositories.
